OBJECTIVE

Seeking open role as a web developer in an organization which exemplifies integrity, modern tooling, and room for growth.

EXPERIENCE

Web Developer for Gorilla Group from August 2019 to present

Deepened expertise in React framework, particularly with data driven components. Practiced the BEM naming methodology to clarify and organize relationships between HTML and CSS. Applied the Atomic design methodology to keep templates simple, clear, and easily reusable. Employed Hammer JavaScript library for mobile-specific interactions.

Junior Developer for Mess Marketing from 2018 to 2019

Developed responsive web pages for client projects utilizing Vue.js and WordPress. Lead quality assurance testing for all client projects. Worked with Director to understand, document and transition towards managing agency's DevOps toolchain and release process. Coordinated with project management team to manage content entry, developer workload and release.

Freelance Web Developer from 2017 to 2018

Built functional, responsive web sites for a variety of clients. Utilized Git version control to regulate site growth. Networked with aspiring businesses whom desired ecommerce expertise.
